

B3 Tournament Ranking

Each player in a tournament plays six games. There are no ties. The tournament director places the players in groups based on the results of games as follows:

- if a player wins 5 or 6 games, they are placed in Group 1;
- else if a player wins 3 or 4 games, they are placed in Group 2;
- else if a player wins 1 or 2 games, they are placed in Group 3;
- else if a player does not win any games, they are eliminated from the tournament.

Write a program to determine which group a player is placed in.

Sample Input 1

```
Game 1 (W/L) : W
Game 2 (W/L) : L
Game 3 (W/L) : W
Game 4 (W/L) : W
Game 5 (W/L) : L
Game 6 (W/L) : W
```

Team is placed in group 2

Sample Input 2

```
Game 1 (W/L) : L
Game 2 (W/L) : L
Game 3 (W/L) : L
Game 4 (W/L) : L
Game 5 (W/L) : L
Game 6 (W/L) : L
```

Team is eliminated.

Steps:

1. Ask for the results of each of the games:

```
Game 1 (W/L) : L
Game 2 (W/L) : L
Game 3 (W/L) : L
Game 4 (W/L) : L
Game 5 (W/L) : L
Game 6 (W/L) : L
```

2. Make a total variable:

```
int total =0;
```

3. Write 6 if statements to add to it:

```
if(game1.equals("W"))
    total = total +1;
```

4. Then, write an if, else if, else structure to print out what group the team is in.
