

Egg Cartons

180 eggs go in
a crate.

12 eggs go
in a carton

Write a program that asks for the number of eggs and calculates the number of crates, cartons and leftover eggs that will exist.

Use MOD (%) in your calculations.

For example:

How many eggs? 14

That is 0 crate(s), 1 carton(s), and 2 egg(s)
leftover.

Another example:

How many eggs? 987

That is 5 crate(s), 7 carton(s), and 3 egg(s)
leftover.

Yet Another example:

How many eggs? 81

That is 0 crate(s), 6 carton(s), and 9 egg(s)
leftover.
