

Sort 3

Make a program that gets 3 numbers and then prints them in sorted order on the screen. It is possible that some of the numbers might be the same.

For example:

```
What is the first number? 4  
What is the second number? 7  
What is the third number? 1
```

```
In sorted order, they are 1, 4, 7
```

For another example:

```
What is the first number? 5  
What is the second number? 2  
What is the third number? 5
```

```
In sorted order, they are 2, 5, 5
```
