

Custom Line Loops

Write a program that makes 5 lines for a user.

Each time it asks them what character they want repeated and how many times they want it repeated. Then, it draws their line.

For example:

```
----- Welcome to Lines! -----
```

```
What character would you like for line #1? $
```

```
How many would you like? 10
```

```
$$$$$$$$$$
```

```
What character would you like for line #2? @
```

```
How many would you like? 3
```

```
@@@
```

```
What character would you like for line #3? A
```

```
How many would you like? 20
```

```
AAAAAAAAAAAAAAAAAAAA
```

```
What character would you like for line #4? 2
```

```
How many would you like? 12
```

```
222222222222
```

```
What character would you like for line #5? *
```

```
How many would you like? 8
```

```
*****
```

```
Thank you, goodbye!
```
