

Notakto

Notakto is a tic-tac-toe variant.

- Both of the players use the same piece (an "X" or cross).
- The game ends when the board contains a three-in-a-row of Xs, at which point the player to have made the last move loses the game.
- In this game, unlike tic-tac-toe, there will always be a player who wins any game of Notakto.

Your assignment is to adapt the tic-tac-toe game so that it becomes Notakto.
