

Welcome Screen

Create the above applet.

- Use the starter code:
http://www.gorskicompsci.ca/ICS3U/Unit4/aa_AppletStarterCode.pdf
- Use the cheat sheet:
http://www.gorskicompsci.ca/ICS3U/Unit4/aa_CodeCheatSheet.pdf
- The JTextfields were of length 9.
- The applet was 150 x 170.
- It will **NOT** work. It will only look at you. That's fine. We will learn how to make them work later in the unit.

Remember that if you don't resize things properly, they might look something like this:

To fix it, use the code:

```
resize (150, 170);
```

Calculator

- Make this calculator screen.
- If it worked, it would only add. Life is like that sometimes.
- Cut and paste is your friend.
- I used the dimensions: `resize(150,150);`
