

# Question and Answer

- Make sure that **IO** is saved to your current folder.

Ask the user some questions and save their answers to a file.

The questions you should ask are:

1. How old are you?
2. What is your first name?
3. What is your last name?
4. What day of the week is it?
5. What year is it?
6. What colour is your shirt?

Make sure that your answers to the file are in **sentence form**.

```
import java.io.*;
public class QandAns
{
    public static void main (String args[])
    {
        new QandAns ();
    }

    public QandAns ()
    {
        PrintWriter out;
        try
        {
            out = new PrintWriter (new FileWriter ("QandAns.txt"));
            System.out.println("Welcome. Please answer these questions. \n");

            String teacher = IO.inputString("Who is your teacher? ");
            out.println ("Your teacher is named "+teacher);

            //TO DO: Enter the other questions

            System.out.println("\nThank you. Please go and open the file.");
            out.close ();
        }
        catch (IOException e)
        {
            System.out.println ("Error opening file " + e);
        }
    }
}
```
