

Finding Objects

Objects have a very general vague definition.

That's because it covers a lot of really different things.

Students don't like this definition, sorry, but it is an accurate one.

Object

Data

Methods

TOTAL TASKS COMPLETED

Sabotage and kill everyone.

Fake Tasks:

Electrical: Fix Wiring (0/3)

Storage: Fuel Engines (0/2)

Electrical: Divert Power to Weapons (0/2)

Electrical: Calibrate Distributor

Tasks

The Crewmates
(or Imposters)
in AmongUs are
objects.

Brocooly

HawIDog

The option menus let you see some of the **data** stored.

Selecting an option and applying it to a crewmate is a **method**.

Data

Name

Von Neumann

Hat

Colour

Islimposter

Pet

Skin

TOTAL TASKS COMPLETED

Methods

Things your
crewmate can do!
Fuel engines
Download Data
Unlock safe
Walk

Tasks

qs

The reason that we want an object is that we want to associate the Data and Methods together.

We want to group them for many reasons, one of which is organization.

Object

Data

Methods

This is a
tweet object

Emily Adrian

@adremily

4 year old: is money real or pretend?

Me: *clears throat* *takes sip of water* *arranges
notes on podium*

Tweet object

User object

Media object

Poll object

Place objects

Actually, the tweet object is formally and publically defined so programmers can use it.

Tweet

Tweets are the basic building block of all things Twitter. The Tweet object has a long list of 'root-level' fields, such as `id`, `text`, and `created_at`. Tweet objects are also the 'parent' object to several child objects including `user`, `media`, `poll`, and `place`. Use the field parameter `tweet.fields` when requesting these root-level fields on the Tweet object.

The Tweet object that can be found and expanded in the user resource. Additional Tweets related to the requested Tweet

This is some of
the tweet
object's code

Name a
category of
data that is part
of the tweet
object.

```
"id": "1212092628029698048",  
"text": "Today I had a banana for breakfast",  
"author_id": "2244994945",  
"public_metrics": {  
  "retweet_count": 8,  
  "reply_count": 2,  
  "like_count": 40,  
  "quote_count": 1  
},  
"lang": "en",  
"created_at": "2019-12-31T19:26:16.000Z",  
"source": "Twitter Web App",  
"in_reply_to_user_id": "2244994945",
```

```
public void save(View view) {
    try {
        FileOutputStream out = openFileOutput("data.txt", Activity.MODE_PRIVATE);
        for(int i=0; i<a.length; i++) {
            out.write(a[i]);
        }

        out.flush();
        out.close();
    } catch (FileNotFoundException e) {
        e.printStackTrace();
    } catch (IOException e) {
        e.printStackTrace();
    }
}
```

Object FileOutputStream

Data

File name
Mode

Methods

?

Name a file
method.

```
public void save(View view) {
    try {
        FileOutputStream out = openFileOutput("data.txt", Activity.MODE_PRIVATE);
        for(int i=0; i<a.length; i++) {
            out.write(a[i]);
        }

        out.flush();
        out.close();
    } catch (FileNotFoundException e) {
        e.printStackTrace();
    } catch (IOException e) {
        e.printStackTrace();
    }
}
```

Take a look at the
output file code
from yesterday.

Object FileOutputStream

Data

File name
Mode

Methods

write
flush
close

Name a file
method.

<ImageView

```
    android:layout_width="wrap_content"  
    android:id="@+id/flagpic"  
    android:src="@drawable/green"  
    android:layout_margin="10dp"  
    android:layout_gravity="center"  
    android:layout_height="wrap_content" />
```

An ImageView is an Object. Name one piece of data it stores. Look in the XML.

```
pics[m] = new ImageView(context.this);  
setpicStart(pics[m], m);  
pics[m].setImageResource(R.drawable.green);  
pics[m].setId(m);  
pics[m].setOnClickListener((v) -> {  
    gridButtonClick(v.getId());  
});
```

Object

Data

Methods

<ImageView

```
android:layout_width="wrap_content"  
android:id="@+id/flagpic"  
android:src="@drawable/green"  
android:layout_margin="10dp"  
android:layout_gravity="center"  
android:layout_height="wrap_content" />
```

An ImageView is an Object. Name one of its methods. Look in the Java.

```
pics[m] = new ImageView(context.this);  
setpicStart(pics[m], m);  
pics[m].setImageResource(R.drawable.green);  
pics[m].setId(m);  
pics[m].setOnClickListener((v) → {  
    gridButtonClick(v.getId());  
});
```

Object

Data

Methods

Another way of thinking of an object
(that I find useful) is that an object is
a **complex variable type**.

Primitive Types

int, double,
boolean, char

**Objects
(Complex Types)**

String, ImageView, Button,
FileOutputStream

Where would you classify
a TextView?

Primitive Types

Objects
(Complex Types)

Where would you classify
a JLabel?

Primitive Types

Objects
(Complex Types)

Where would you classify
a boolean?

Primitive Types

Objects
(Complex Types)

Some differences:

Primitive Types

int, double,
boolean, char

Objects (Complex Types)

String, ImageView, Button,
FileOutputStream

Examples

Some differences:

Named with small letter

Primitive Types

int, double,
boolean, char

Named with capital letter

Objects
(Complex Types)

String, ImageView, Button,
FileOutputStream

Examples

Some differences:

Named with small letter

Primitive Types

Named with capital letter

Objects
(Complex Types)

Examples

int, double,
boolean, char

String, ImageView, Button,
FileOutputStream

Testing equality

`score1 == score2`

`score1.equals(score2)`

Some differences:

Named with small letter

Primitive Types

Named with capital letter

Objects
(Complex Types)

Examples

int, double,
boolean, char

String, ImageView, Button,
FileOutputStream

Testing equality

```
score1 == score2
```

```
score1.equals(score2)
```

Changing value

```
score1 = 4;  
score2++;
```

```
score1.setText("score:" + s);
```

Some differences:

Named with small letter

Primitive Types

Named with capital letter

Objects
(Complex Types)

Examples

int, double,
boolean, char

String, ImageView, Button,
FileOutputStream

Testing equality

```
score1 == score2
```

```
score1.equals(score2)
```

Changing value

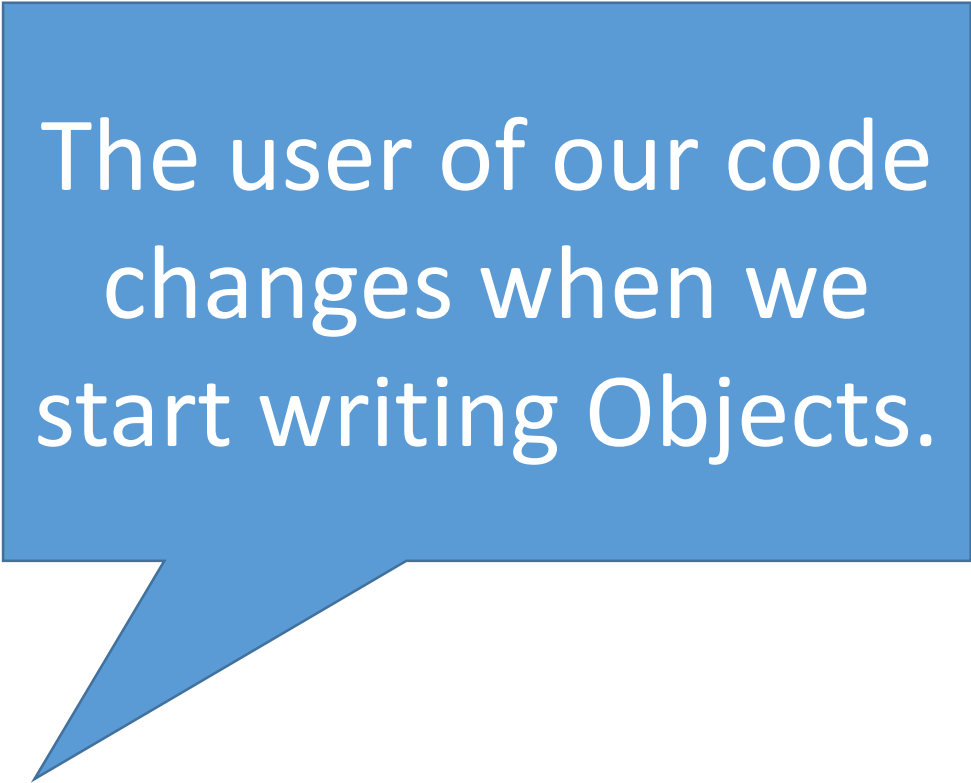

```
score1 = 4;  
score2++;
```

```
score1.setText("score:" + s);
```

Finding value

```
score1  
(Use variable name)
```

```
score1.getText();
```

A blue speech bubble with a white border and a tail pointing towards the bottom-left. It contains white text.

The user of our code
changes when we
start writing Objects.

A blue speech bubble with a white border and a tail pointing towards the bottom-left. It contains white text.

Our fellow
programmers are the
users of our objects.

Object Method Types
