

# Venn Diagrams

A.1.2 sample space as a set that contains all possible outcomes of an experiment, and distinguish between a discrete sample space as one whose outcomes can be counted (e.g., all possible outcomes of drawing a card or tossing a coin) and a continuous sample space as one whose outcomes can be measured (e.g., all possible outcomes of the time it takes to complete a task or the maximum distance a ball can be thrown)

A.1.3 determine the theoretical probability,  $P$  (i.e., a value from 0 to 1), of each outcome of a discrete sample space (e.g., in situations in which all outcomes are equally likely), recognize that the sum of the probabilities of the outcomes is 1 (i.e., for  $n$  outcomes,  $P + P + P + \dots + P = 1$ ), recognize that the probabilities  $P$  form the probability distribution associated with the sample space, and solve related problems

A.1.5 recognize and describe an event as a set of outcomes and as a subset of a sample space, determine the complement of an event, determine whether two or more events are mutually exclusive or non-mutually exclusive (e.g., the events of getting an even number or getting an odd number of heads from tossing a coin 5 times are mutually exclusive), and solve related probability problems [e.g., calculate  $P(\sim A)$ ,  $P(A \text{ and } B)$ ,  $P(A \text{ or } B)$ ] using a variety of strategies (e.g., Venn diagrams, lists, formulas)

There are three main strategies for calculating probability:

1. List the sample space
2. Use a tree diagram
3. Use a Venn diagram

Often a problem can be solved more than one way.

Less than 5

Striped

What is the probability that a card drawn at random is striped AND less than five?

What is the probability that a card drawn at random is striped OR less than five?

Less than 5

Striped

What is the probability that a card drawn at random is striped AND less than five?

$$\text{SandF} = \{1, 2\}$$

What is the probability that a card drawn at random is striped OR less than five?

$$\text{SorF} = \{1, 2, 3, 4, 5, 9\}$$

Less than 5

Striped

What is the probability that a card drawn at random is striped AND less than five?

$$\text{SandF} = \{1, 2\}$$

$$\begin{aligned} P(\text{SandF}) &= \frac{2}{12} \\ &= \frac{1}{6} \end{aligned}$$

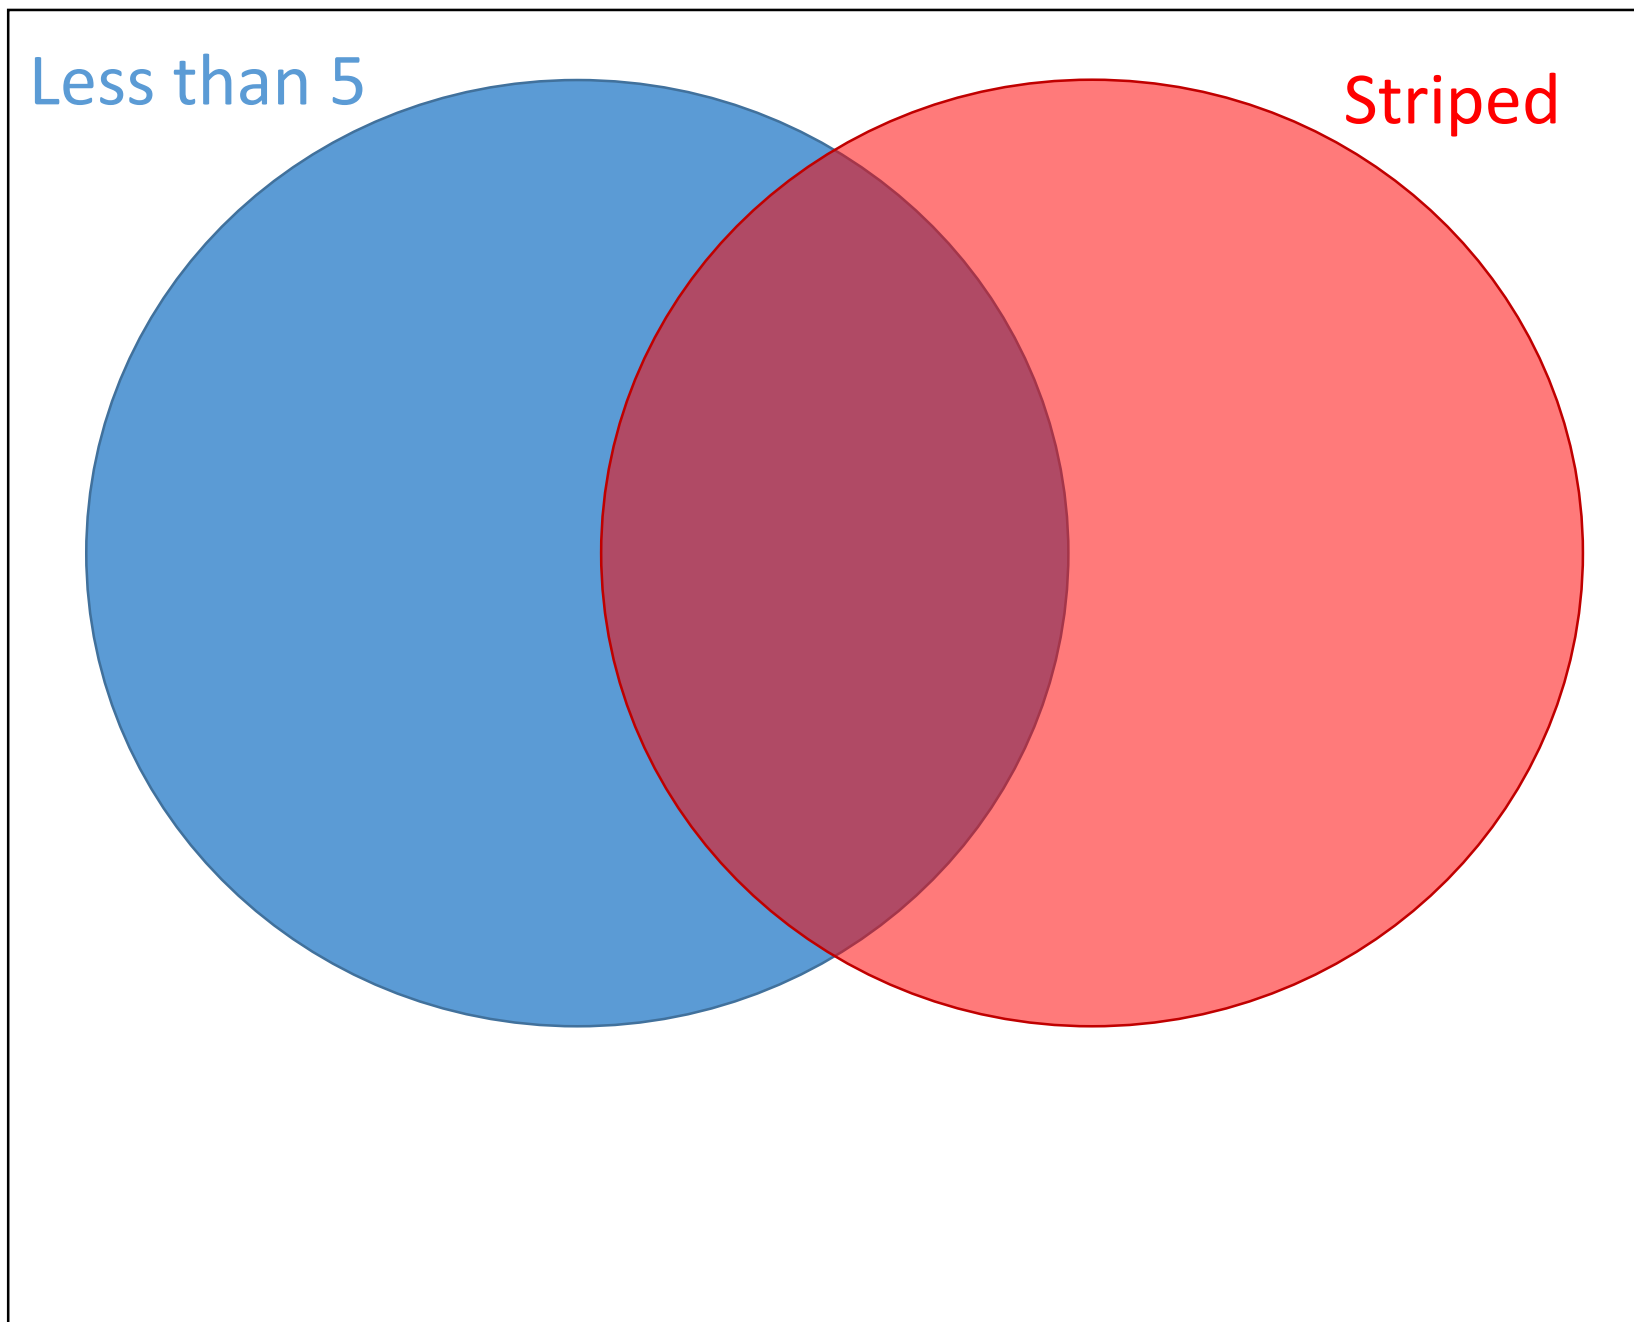

What is the probability that a card drawn at random is striped OR less than five?

$$\text{SorF} = \{1, 2, 3, 4, 5, 9\}$$

$$\begin{aligned} P(\text{SorF}) &= \frac{6}{12} \\ &= \frac{1}{2} \end{aligned}$$

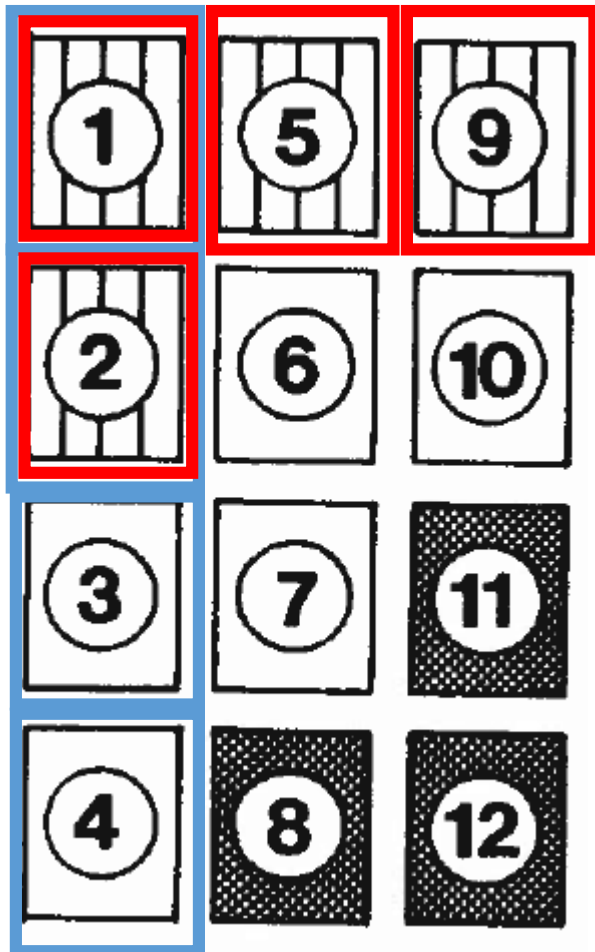

Convert the Sample Space into a Venn Diagram.

The events you are considering are:

A: Less than 6

B: Multiple of 2

C: Multiple of 3

Place these  
numbers into  
the diagram:

0, 1, 2, 3, 4, 5,  
6, 7, 8, 9

The events you are considering are:

A: Less than 6;  $A=\{0,1,2,3,4,5\}$

B: Multiple of 2;  $B=\{2, 4, 6, 8\}$

C: Multiple of 3;  $C=\{3, 6, 9\}$

Place these  
numbers into  
the diagram:

0, 1, 2, 3, 4, 5,  
6, 7, 8, 9

The events you are considering are:

A: Less than 6;  $A=\{0,1,2,3,4,5\}$

B: Multiple of 2;  $B=\{2, 4, 6, 8\}$

C: Multiple of 3;  $C=\{3, 6, 9\}$

Place these  
numbers into  
the diagram:

0, 1, 2, 3, 4, 5,  
6, 7, 8, 9

The Venn diagram alongside illustrates the number of students in a particular class who study Chemistry ( $C$ ) and History ( $H$ ). Determine the number of students:

- a** in the class
- b** who study both subjects
- c** who study at least one of the subjects
- d** who only study Chemistry.

The Venn diagram alongside illustrates the number of students in a particular class who study Chemistry ( $C$ ) and History ( $H$ ). Determine the number of students:

- a** in the class
- b** who study both subjects
- c** who study at least one of the subjects
- d** who only study Chemistry.

$$\begin{aligned} \text{a. } n(\text{Class}) &= 3+5+17+4 \\ &= 29 \end{aligned}$$

50 students went bushwalking. 23 were sunburnt, 22 were bitten by ants, and 5 were both sunburnt and bitten by ants. Determine the probability that a randomly selected student:

- a escaped being bitten
- b was bitten or sunburnt (or both)
- c was neither bitten nor sunburnt

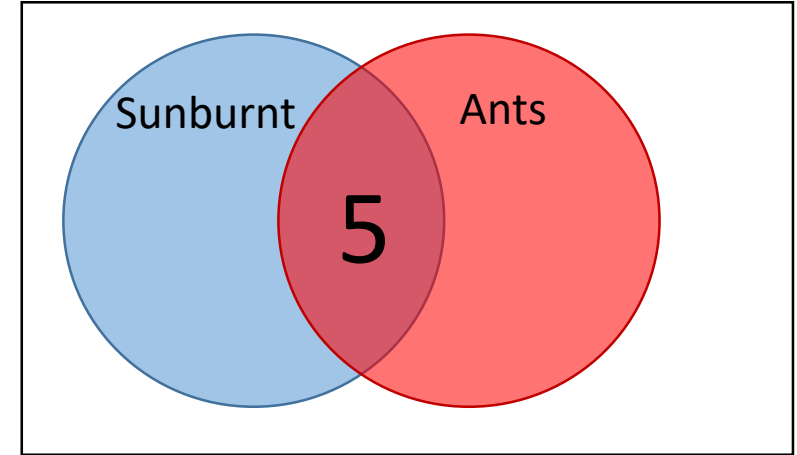

50 students went bushwalking. 23 were sunburnt, 22 were bitten by ants, and 5 were both sunburnt and bitten by ants. Determine the probability that a randomly selected student:

In a certain town three newspapers are published. 20% of the population read  $A$ , 16% read  $B$ , 14% read  $C$ , 8% read  $A$  and  $B$ , 5% read  $A$  and  $C$ , 4% read  $B$  and  $C$ , and 2% read all 3 newspapers. A person is selected at random. Use a Venn diagram to help determine the probability that the person reads:

**a** none of the papers

**c** exactly one of the papers

**b** at least one of the papers

**d**  $A$  or  $B$  (or both)

$$A = 20\%$$

$$B = 16\%$$

$$C = 14\%$$

$$A \text{ and } B = 8\%$$

$$A \text{ and } C = 5\%$$

$$B \text{ and } C = 4\%$$

$$\text{All} = 2\%$$

A survey of Grade 12 math students produced these results.

a. How many students are enrolled in Functions and no other math course?

b. How many students are taking exactly 2 math courses?

Math Course	Number of Students
Functions	80
Geometry	33
Data Management	68
Functions and Geometry	30
Geometry and Data Management	6
Data Management and Functions	50
All three courses	5

*Keep in mind this question was written in 1980:*

Linda is thirty-one years old, single, outspoken, and very bright. She majored in philosophy. As a student, she was deeply concerned with issues of discrimination and social justice and also participated in antinuclear demonstrations.

Which is more probable?

- a. Linda is a bank teller.
- b. Linda is a bank teller and is active in the feminist movement.

*Keep in mind this question was written in 1980:*

Linda is thirty-one years old, single, outspoken, and very bright. She majored in philosophy. As a student, she was deeply concerned with issues of discrimination and social justice and also participated in antinuclear demonstrations.

Which is more probable?

- a. Linda is a bank teller.
- b. Linda is a bank teller and is active in the feminist movement.

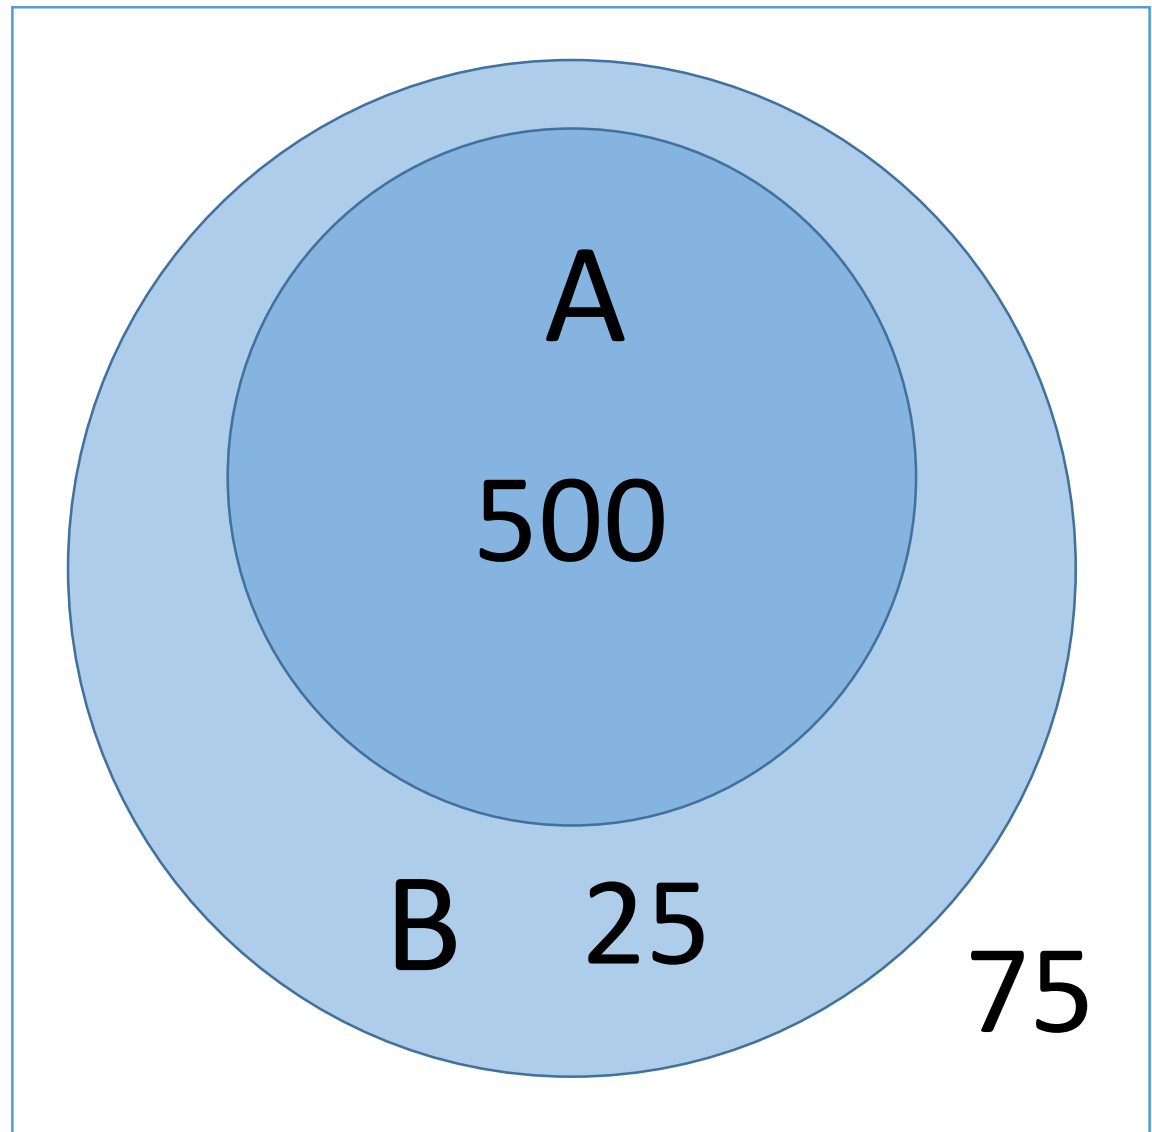

85% to 90%  
picked this.

$$P(A) = \frac{500}{600}$$

$$P(B) = \frac{525}{600}$$

The group that contains the other is ALWAYS more probable.

Bank Teller and Feminist:

$$P(A) = \frac{500}{600}$$

Bank Teller:

$$P(B) = \frac{525}{600}$$

The group that contains the other is ALWAYS more probable.  
Don't let the descriptive details pull you in.

Which is more probable:

- a) A massive flood somewhere in North America next year, in which more than 1,000 people drown.
- b) An earthquake in California sometime next year, causing a flood in which more than 1,000 people drown.

The group that contains the other is ALWAYS more probable.  
Don't let the descriptive details pull you in.
