

Sea of Numbers

You need to find a site with a sea of numbers that you can use for your project.

For example, if I wanted a project based on Pokemon, I might use:

The screenshot shows a web browser window with the URL pokedexdb.net/pokedex/all. The page displays a table of Pokemon statistics. The table has columns for #, Name, Type, Total, HP, Attack, Defense, Sp. Atk, Sp. Def, and Speed. The first five rows are visible, showing Bulbasaur, Ivysaur, Venusaur, Mega Venusaur, Charmander, and Charmeleon.

#	Name	Type	Total	HP	Attack	Defense	Sp. Atk	Sp. Def	Speed
001	Bulbasaur	GRASS POISON	318	45	49	49	65	65	45
002	Ivysaur	GRASS POISON	405	60	62	63	80	80	60
003	Venusaur	GRASS POISON	525	80	82	83	100	100	80
003	Venusaur Mega Venusaur	GRASS POISON	625	80	100	123	122	120	80
004	Charmander	FIRE	309	39	52	43	60	50	65
005	Charmeleon	FIRE	405	58	64	58	80	65	80

The replication on the website has 806 Pokémons, only 5 are shown above. For each Pokémon, there are 10 variables, 7 of which are numbers.

Bring the URL (in this case: <https://pokedexdb.net/pokedex/all>) to class.

Be prepared to tell me your topic and to show me the webpage with the numbers.
