

Favourites

In this program, you should experiment with the Micro:bit and select your favourites from the options available.

A video with instructions about how to get started in TinkerCAD Micro:bits is here: <https://youtu.be/yc5p9CZNMt4>

Details about what you should do:

	<p>When the B button is pressed, display your name.</p>		<p>In the on start block, choose your favourite icon from the list provided.</p>
	<p>When the A+B button is pressed, display your favourite number.</p>		<p>In the on shake block, clear the screen and choose a different co-ordinate.</p> <p>(I figured that no one had a favourite co-ordinate. Anyways, I already picked the best one.)</p>
	<p>When the A button is pressed, display a custom picture that you have created.</p> <p>Ideas are on the next page if you are stuck.</p>		<p>Your final addition is to choose another event and another block to go in it.</p> <p>Be careful to add this part to your program.</p>
